Enertech Performance InterConnected

Powerful. Flexible. Connected.

With informative connectivity, ongoing product support, and more flexibility upon installation than anything else in the industry, EPIC is the **premier solution** for heat pump monitoring and controls.

The demands of the modern structure are as ever-changing as the technology that rises to the challenge. Geothermal has always been the most efficient, reliable, and sustainable method of keeping a home or building comfortable, and now it's connected. With Enertech's EPIC connected controls, the power to monitor your HVAC system is in your hands, and with much more real-time data when compared to a standard smart thermostat.

With EPIC, you'll gain unprecedented insights into the usage, efficiency, and performance of your geothermal system no matter where you are – all in real time! Take control of your comfort with Enertech's EPIC connected controls.

EPIC is **more than just monitoring**. When paired with the myUplink app, you get...

- **Pain-free installation:** EPIC works with most heat pump thermostats and integrates directly into your home's WiFi. No extra equipment necessary.

- **Unbeatable insight:** Through myUplink, you'll gain access to powerful energy monitoring tools and peace-of-mind, even while away from home.

- **Cross-device access:** Connect from your desktop, tablet, or mobile device.

- **Future-proofed compatibility**: EPIC receives over-the-air updates, so you can be sure that you're equipped with the latest software and seamless communication between your unit, EPIC, and the myUplink app.

EPIC, FOR PROFESSIONALS

EPIC is the **most flexible suite of control and monitoring tools** in the industry. An intuitive setup process, universal integration with most 24 VAC heat pump thermostats and WiFi routers, and powerful professional features provide the contractor with unparalleled capability.

Using myUplink PRO, EPIC boasts robust diagnostic tools:

Energy monitoring *EPIC tracks watts daily, weekly, monthly, and annually*
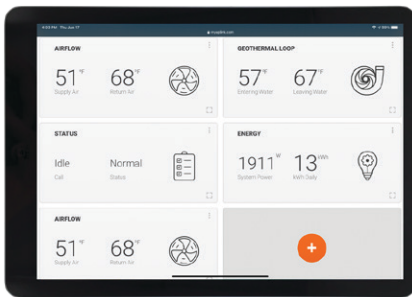

Entering and leaving water temperatures

Entering and leaving air temperatures

Lock-out status notifications

Jumper settings on lockout board

EPIC uses the same lockout and ECM boards that you are already familiar with on Enertech's products. **So, with a simple, guided setup process, installation is a breeze**.

As a dealer using myUplink Pro, you can see a library of all your installed connected units in one, simple view. You will also receive alarms, cloud-based historical data, and notifications if a system is offline. Instill further trust with your customers and be notified of potential issues and routine maintenance needs with the diagnostic tools provided by EPIC.

Take the **trouble** out of **troubleshooting**

EPIC integrates operation, monitoring, and diagnostics into one easy to use app. **Bring the right tools for the right job** before arriving on site with the information provided in myUplink Pro. EPIC's internet gateway supplies valuable feedback through an LED ring on the device. Gain insights indicating the unit's operation status:

- **Idle**
- **Ready for commissioning**
- **Lockout**
- **Operating in heating or cooling**
- **WiFi disconnected**
- **Software update**

EPIC makes monitoring and troubleshooting complications a thing of the past, so you can focus on creating happy customers that rely on your business year after year. *EPIC is currently available on Enertech's YT, BS/BT, ZT, and Advantage systems, with broader product line compatibility coming soon.*
