# FONT USAGE

For large headings, Hydron Module uses Vegur Light. It is a clean, geometric, highly legible sans serif typeface very well suited for any display and text use. This is paired with Roboto Bold for any subheadings, making for a strong contrast in weights and allowing for important information to be prominent.

For body text, Chaparral Pro Regular is used. However when calling out important information or quotes, using Semibold and Semibold Italic are also acceptable.

# LOGO SIZING

### **Lockup Version**

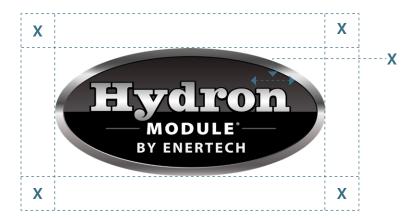

The Lockup version should be used in almost all cases where it is necessary to brand something as Hydron Module. The Lockup version should be used in all cases except when the use of a gradient is not possible. Only then should flat color options be used. The Lockup version should never appear smaller than 1.2" wide for legibility.

### **Minimum Sizing**

Minimum size 1.2" wide

#### **Clearance**

The Lockup version should always be surrounded by white space equal to the width of the symbol (represented by "X" in the diagram). "X" is equal to the width of the letter "N" in "Hydron" in the Lockup version. You may use white space greater than "X", but you should never use less. All other design elements should be clear of this space.

# LOGO COLORS

# LOGO USAGE

The Hydron Module logo elements should always be used as is. Do not modify it in any way. Typography, proportions, or colors must remain unchanged. Below are examples of ways the Hydron Module logo may **NOT** be used.

#### **DO NOT** distort proportions when sizing

#### **DO NOT** rearrange components

#### **DO NOT** rotate

#### **DO NOT** combine with other graphics

**DO NOT** use on complex or low contrast backgrounds

#### **DO NOT** change the typeface
